Office Action Summary

Art Unit: 1625

Claims 4-6, 8-9 are pending.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 9 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The compound which contains X being an anion had not been disclosed and/or taught in the specification. The specification does not contain the definition of the term X as well.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schulze et al.

Schulze et al teaches a purified carbolactone which has a chemical formula identical to the instant carbolactone; note the Abstract, the second compound in column 3, compound in lines 5-11 in column 8 and compound of claim 6 of the patent. The patented compound is made by a process different from the current process and does not contain the specific impurities as

Art Unit: 1625

mentioned by the current compound. However, since both the claimed compound and the patented compound have identical chemical structures, the claimed invention would be deemed obvious over the patented compound in the absence of unobvious and/or unexpected results because a compound can be made by more than one process.

No claim is allowed.
